## In the Claims:

Please amend claims 1 and 12. A detailed listing of the claims is provided, below.

1. (Currently Amended) An intrinsically acentric chromophore compound of a formula

$$D - Ar_{x}^{1}(X = X)_{n} Ar_{y}^{2} - A$$

wherein D is a moiety comprising a plurality of hydrogen <u>bond-forming hydrogen</u> donor groups; A is a moiety comprising a plurality of hydrogen <u>bond-forming hydrogen</u> acceptor groups; (-X = X-) is a  $\pi$ -bonded component comprising at least one of carbon and a heteroatom; n, x and y are independently  $\geq 0$ ; and x + y is  $\geq 1$ .

- 2. (Original) The chromophore compound of claim 1 of a formula  $D Ar^{1} (X = X)_{n} Ar^{2} A.$
- 3. (Original) A chromophore compound of claim 1 of a formula  $D Ar^1 (X = X)_n A$ .
- 4. (Original) The chromophone compound of claim 1 of a formula  $D(X = X)_n Ar^2 A.$
- 5. (Original) The chromophone compound of claim 1 wherein said D comprises a moiety having a structural formula selected from

$$R_1N$$
 and  $R_3$   $R_3$   $R_1N$ 

wherein  $R_1$ - $R_3$  are independently selected from hydrogen, electron-donating substituents and electron-withdrawing substituents.

6. (Original) The chromophore compound of claim 1 wherein said A comprises a moiety having a structural formula selected from

wherein R<sub>7</sub> is selected from hydrogen, electron-donating substituents and electron-withdrawing substituents.

7. (Original) The chromophore compound of claim 1 wherein  $(-X = X-)_n$  comprises a moiety having a structural formula selected from  $(-C = C-)_n$  and

$$(X = X)_{m'}$$

$$(X = X)_{m'}$$
wherein  $m + m' \ge 1$ .

- 8. (Original) The chromophore compound of claim 1 wherein said Ar<sup>1</sup> and said Ar<sup>2</sup> are independently selected from phenyl, benzylidene, pyridinyl, pyrimidinyl, thiophenyl and thiazinyl moieties.
  - 9. (Original) The chromophore compound of claim 8 wherein x + y = 1.

## 10. (Original) An intrinsically acentric chromophore compound of a formula

wherein D is a moiety having a structural formula selected from

$$R_1N$$
 and  $R_2N$   $R_3$   $R_3$ 

and A is a moiety having a structural formula selected from

$$O \longrightarrow NH$$
 and  $NH$ 

wherein  $R_1$ ,  $R_2$ ,  $R_3$  and  $R_7$  are independently selected from hydrogen, electron-donating substituents and electron-withdrawing substituents.

11. (Original) The chromophore compound of claim 10 wherein said D comprises a triazin-2-yl moiety of a structural formula

$$HR_1N$$
 $N$ 
 $N$ 
 $HR_2N$ 

and said A comprises a pyrimidin-2,4,6-trion-3-yl moiety of a structural formula

$$O \longrightarrow NH$$
 $R_7 O$ 

wherein R<sub>1</sub>, R<sub>2</sub> and R<sub>7</sub> are H.

12. (Currently Amended) An intrinsically acentric electro-optic film comprising hydrogen-bonded chromophore compounds of the formula

$$D - Ar_{x}^{1}(X = X)_{n} Ar_{y}^{2} - A$$

wherein D is a moiety comprising a plurality of hydrogen <u>bond forming hydrogen</u> donor groups; A is a moiety comprising a plurality of hydrogen <u>bond-forming hydrogen</u> acceptor groups; (-X = X-) is a  $\pi$ -bonded component comprising at least one of carbon and a heteroatom; n, x and y are independently  $\geq 0$ ; and x + y is  $\geq 1$ .

13. (Original) The electro-optic film of claim 12 wherein said D comprises a moiety having a structural formula selected from

wherein  $R_1$ - $R_3$  are independently selected from hydrogen, electron-donating substituents and electron-withdrawing substituents.

14. (Original) The electro-optic film of claim 12 wherein said A comprises a moiety having a structural formula selected from

$$O \longrightarrow NH \qquad \text{and} \qquad \bigvee_{N \neq 1} O \cap NH$$

wherein R<sub>7</sub> is selected from hydrogen, electron-donating substituents and electron-withdrawing substituents.

15. (Original) The electro-optic film of claim 12 wherein  $(-X = X-)_n$  comprises a moiety having a structural formula selected from  $(-C = C-)_n$  and

$$(X = X)_m$$
  
 $(X = X)_m$   
wherein  $m + m' \ge 1$ .

- 16. (Original) The electro-optic film of claim 12 wherein x + y = 1.
- 17. (Original) The electro-optic film of claim 12 wherein said film is on a substrate comprising a component selected from a hydrogen-donor moiety and a hydrogen-acceptor moiety, for hydrogen bonding with said chromophore.
- 18. (Original) The electro-optic film of claim 17 wherein said substrate comprises the condensation product of hydroxylated indium tin oxide and an aminoalkyltrialkoxysilane.
- 19. (Withdrawn) A method of using hydrogen-bonding for acentric chromophore orientation, said method comprising:

providing a substrate comprising one of a hydrogen-donor moiety and a hydrogen-acceptor moiety;

contacting said substrate with a vapor phase chromophore compound having a first terminal moiety comprising a plurality of hydrogen-donor groups, and a second terminal moiety comprising a plurality of hydrogen-acceptor groups; and

contacting said first chromophore compound with a second said vapor phase chromophore compound, wherein said first and second chromophore compounds are a compound of claim 1.

- 20. (Withdrawn) The method of claim 19 wherein said first terminal moiety is selected from the moieties of claim 5.
- 21. (Withdrawn) The method of claim 19 wherein said second terminal moiety is selected from the moieties of claim 6.
- 22. (Withdrawn) The method of claim 19 wherein said substrate further comprises the condensation product of a hydroxylated portion of said substrate and an aminoalkyltrialkoxysilane, and an melamine moiety, for hydrogen-bonding with said chromophore.
